

Instructions for the help list for distance labs in TSBB09

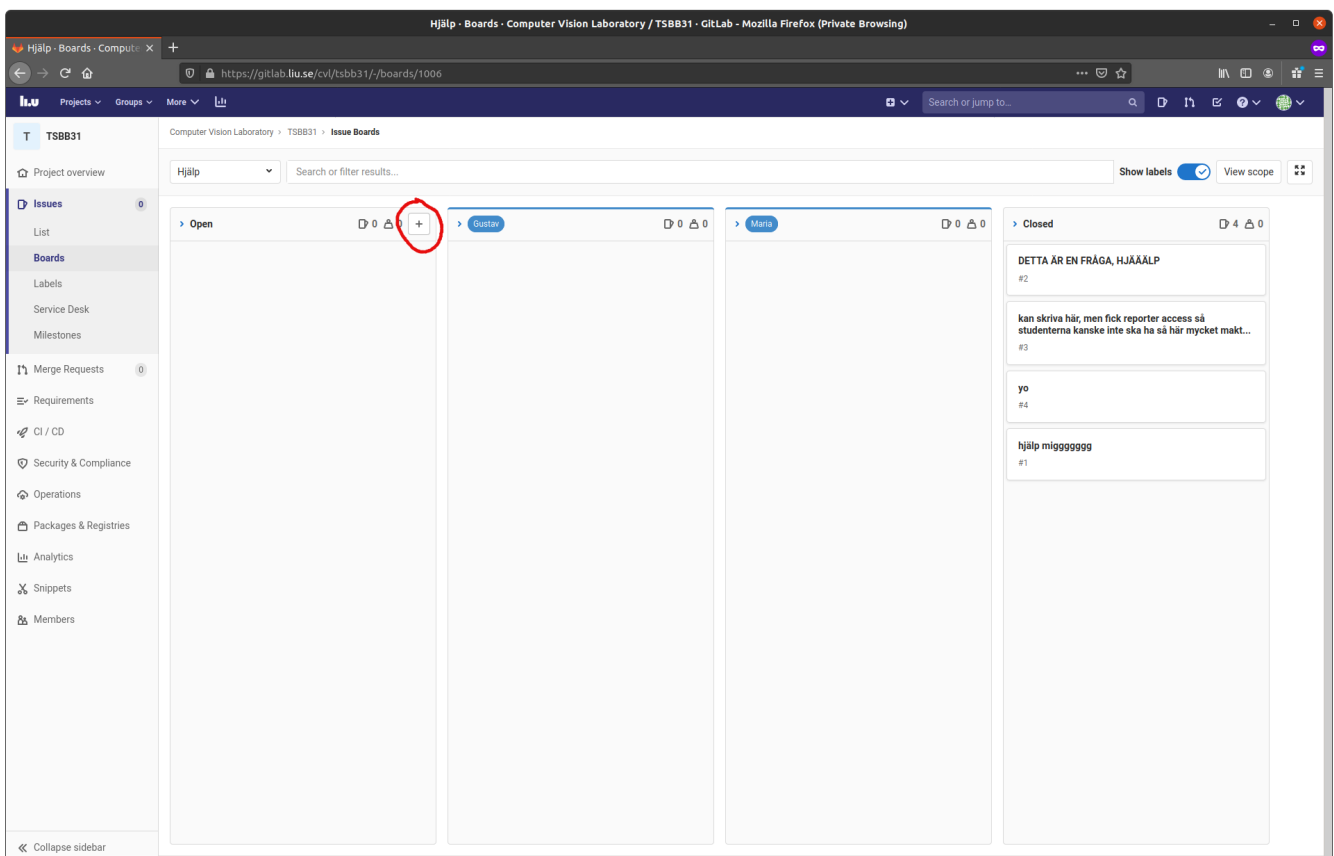

Gustav Häger, Maria Magnusson

October 28, 2020

1 Helplist

To get a helplist for labs in distance mode, we will use a tool in gitlab. For the course TSBB09, the helplist is at <https://gitlab.liu.se/cvl/tsbb09/-/boards>. The figure below shows approximately how it looks like, i.e. it shows the helplist for another course.

By pressing the red-marked plus-sign, you can add a question, an “issue”. In order for the lab assistant to be able to contact you, the issue text must contain a link to your own zoom meeting. The issues are automatically numbered and sorted by when they were added. All lab assistants have their own column. The lab assistant take the current issue and moves it to his/her column. Then, the lab assistant connects to the student’s zoom meeting and helps the student. When the issue is solved, the lab assistant moves it to the closed column. This way, all involved persons can view whats going on.

2 How do I get the link to my own zoom meeting?

See the figure below. In the client for zoom (here linux) you can find the identity for the meeting you are in by clicking on the small i-icon, top left. This will open a box. Here you can see the meeting identity and a link (marked in red in the figure).
